CAT4 Cross Tabulation Guide – Cardiovascular (CVD) patients with last visit 6-12 months and missing/overdue influenza and CDM review not recorded in past 12 months.

An Australian Government Initiative

Select most recent data extract utilising the 'view extract' button - https://help.pencs.com.au/display/CG/Navigating+CAT4

If data extract > 1 month old, consider collecting a new data set to obtain up to date information - <u>https://help.pencs.com.au/display/CG/COLLECTING+DATA+SETS</u>

Step 1 – Define your population

NB: Using the active patient filter will help narrow down current practice patients as it will only include patients who have attended the practice three or more times in the past 2 years.

Click on the Immunisations tab and select Nothing Recorded, Previous year and Prior to previous year

Click on the MBS items tab and then click on the not recorded tab. Select CDM review.

Click on the Report tab located near the top of the screen

A patient list report will open showing all Cardiovascular Disease (CVD) patients with a last visit 6-12months, Influenza missing/overdue and CDM review not recorded in past 12 months.

Suggestion – your patient list should ideally have between 50-100 patients. If your patient list has a higher number, consider proceeding to step 3

Step 3 (optional) – To further narrow down your patient list please include <u>one</u> of the following options:

NB: A total of 5 items only can be used in a cross-tabulation report

Option 1: No cholesterol recorded

• In the report screen click on Pathology > Cholesterol and select 'no cholesterol recorded'. Click the report tab to generate patient list.

Option 2: No BP recorded

• In the report screen click on Measures > BP and select 'no BP recorded'. Click the report tab to generate patient list.
