DEMOGRAPHIC OVERVIEW

Population

Table 1 shows that the Gold Coast population has grown 2.4% annually from 2014 to 2019 which is slightly above the Queensland rate of 1.5%. The estimated resident population for Gold Coast in 2019 was 636,117 people. The two SA3 regions with the highest growth in population annually from 2014 to 2019 were Ormeau-Oxenford (6.0%) and Surfers Paradise (2.4%).

	2009	2014	2019	Average annual growth from 2014- 2019

Age Breakdown

Table two shows the Gold Coast has the highest percentage of people in the age category of 25-44 years of age (27.5%) which is in line with the Queensland figure (27.3%). As of the 30th June 2019, the rate of people aged 65 years and over on the Gold Coast was 16.4%, which was above the Queensland rate of 15.4%. Within the Gold Coast, Ormeau-Oxenford had the largest percentage of people aged 0-14 years with 24.0%. Southport had the largest percentage of people aged 15-24 with 16.6%. Furthermore, Gold Coast-North had the largest percentage of people aged 65+ with 23.7%.

Projected population

Table five shows the population of the Gold Coast to be 961,076 persons as at 30th June 2041 with an increase of 2.0% per year over 25 years. Within the region, Ormeau-Oxenford is projected to have the largest population as at 30th June 2041 with 273,833 persons. Within the region, Ormeau-Oxenford, is projected to have the fasted growth in population from 30 June 2016 to 2041 with an average annual rate of 3.2 per year.

Australian Statistical Georgraphy Standard

The Australian Statistical Geography Standard (ASGS) provides a framework of statistical areas used by the Australian Bureau of Statistics (ABS) and other organisations to enable the publication of statistics that are comparable and spatially integrated. First introduced in 2011, the ASGS replaced the Australian Standard Geographical Classification (ASGC) that had been in use since 1984. The ASGS provides users with an integrated set of standard areas that can be used for analysing, visualising and integrating statistics produced by the ABS and other organisations.

Statistical Area Level:

• **Statistical Areas Level 4 (SA4s)** are specifically designed for the output of Labour Force Survey data and reflect labour markets within each State and Territory within the population limits imposed by the Labour Force Survey sample. Most SA4s have a population above 100,000 persons to provide sufficient sample size for Labour Force estimates. In regional areas, SA4s tend to have lower populations (100,000 to 300,000). In metropolitan areas, the SA4s tend to have larger populations (300,000 to 500,000). SA4s are aggregations of whole SA3s.

• Statistical Areas Level 3 (SA3s) are designed for the output of regional data. SA3s create a standard framework for the analysis of ABS data at the regional level through clustering groups of SA2s that have similar regional characteristics, administrative boundaries or labour markets. SA3s generally have populations between 30,000 and 130,000 persons. They are often the functional areas of regional towns and cities with a population in excess of 20,000, or clusters of related suburbs around urban commercial and transport hubs within the major urban areas. SA3s are aggregations of whole SA2s

• **Statistical Areas Level 2 (SA2s)** are designed to reflect functional areas that represent a community that interacts together socially and economically. They consider Suburb and Locality boundaries to improve the geographic coding of data to these areas and in major urban areas SA2s often reflect one or more related suburbs. The SA2 is the smallest area for the release of many ABS statistics, including the Estimated Resident Population (ERP), Health & Vitals and Building Approvals data. SA2s generally have a population range of 3,000 to 25,000 persons and have an average population of about 10,000 persons. SA2s are aggregations of whole SA1s
