# CAT4 Cross Tabulation Guide – Cardiovascular (CVD) patients with last visit 6-12 months and missing/overdue influenza and CDM review not recorded in past 12 months.

An Australian Government Initiative

Select most recent data extract utilising the 'view extract' button - https://help.pencs.com.au/display/CG/Navigating+CAT4

If data extract > 1 month old, consider collecting a new data set to obtain up to date information - <u>https://help.pencs.com.au/display/CG/COLLECTING+DATA+SETS</u>

#### Step 1 – Define your population

NB: Using the active patient filter will help narrow down current practice patients as it will only include patients who have attended the practice three or more times in the past 2 years.

									FOBT		Clear Results

#### Step 2 – Identify your measures

#### In the Reports section, click on the Visits tab and click on the 6-12 months

#### Click on the Immunisations tab and select Nothing Recorded, Previous year and Prior to previous year

#### Click on the MBS items tab and then click on the not recorded tab. Select CDM review.

Click on the Report tab located near the top of the screen

A patient list report will open showing all Cardiovascular Disease (CVD) patients with a last visit 6-12months, Influenza missing/overdue and CDM review not recorded in past 12 months.

Suggestion – your patient list should ideally have between 50-100 patients. If your patient list has a higher number, consider proceeding to step 3

### Step 3 (optional) – To further narrow down your patient list please include <u>one</u> of the following options:

NB: A total of 5 items only can be used in a cross-tabulation report

#### Option 1: No cholesterol recorded

• In the report screen click on Pathology > Cholesterol and select 'no cholesterol recorded'. Click the report tab to generate patient list.
