### QIM for the July to September Quarter: Cervical cancer screening

Cervical cancer remains an important, preventable cause of mortality in females and cervical cancer screening has been negatively impacted because of COVID-19. This year, one of the clinical focuses of the GCPHN CQI Team will therefore be on cervical cancer screening and supporting general practices to increase the number of female patients with up-to-date cervical screening. To support practices, GCPHN offers CQI support from a dedicated Project Officer and a range of resources including a Cervical Screening CQI Toolkit and CQI activity templates. For more information, please contact [practicesupport@gcphn.com.au](mailto:practicesupport@gcphn.com.au) for assistance.
