

NEW HORIZONS FOR ALZHEIMER'S DISEASE | THE ROLE OF BIOMARKERS IN ASSESSMENT OF COGNITIVE DECLINE

Saturday 9 May 2026
9:00AM - 12PM

Gold Coast Primary
Health Network

General Practitioners are invited to join expert speakers Dr Karen Savery and Dr Pete Silberberg from Dementia Training Australia for an insightful and practical session exploring the latest developments in Alzheimer's disease diagnosis. The session will clarify the differences between normal cognitive ageing, mild cognitive impairment and dementia, while examining how biomarkers may support earlier and more accurate assessment.

Through real-world primary care scenarios, this session will equip GPs with practical, up-to-date knowledge to support clinical decision-making and prepare for the evolving future of dementia diagnosis and treatment.

Learning Outcomes

- Distinguish the features of normal cognitive ageing, Subjective Cognitive Decline, Mild Cognitive Impairment and dementia
- Explain the underlying pathology of Alzheimer's disease
- Identify which patients may benefit from testing with blood-based biomarkers for Alzheimer's disease
